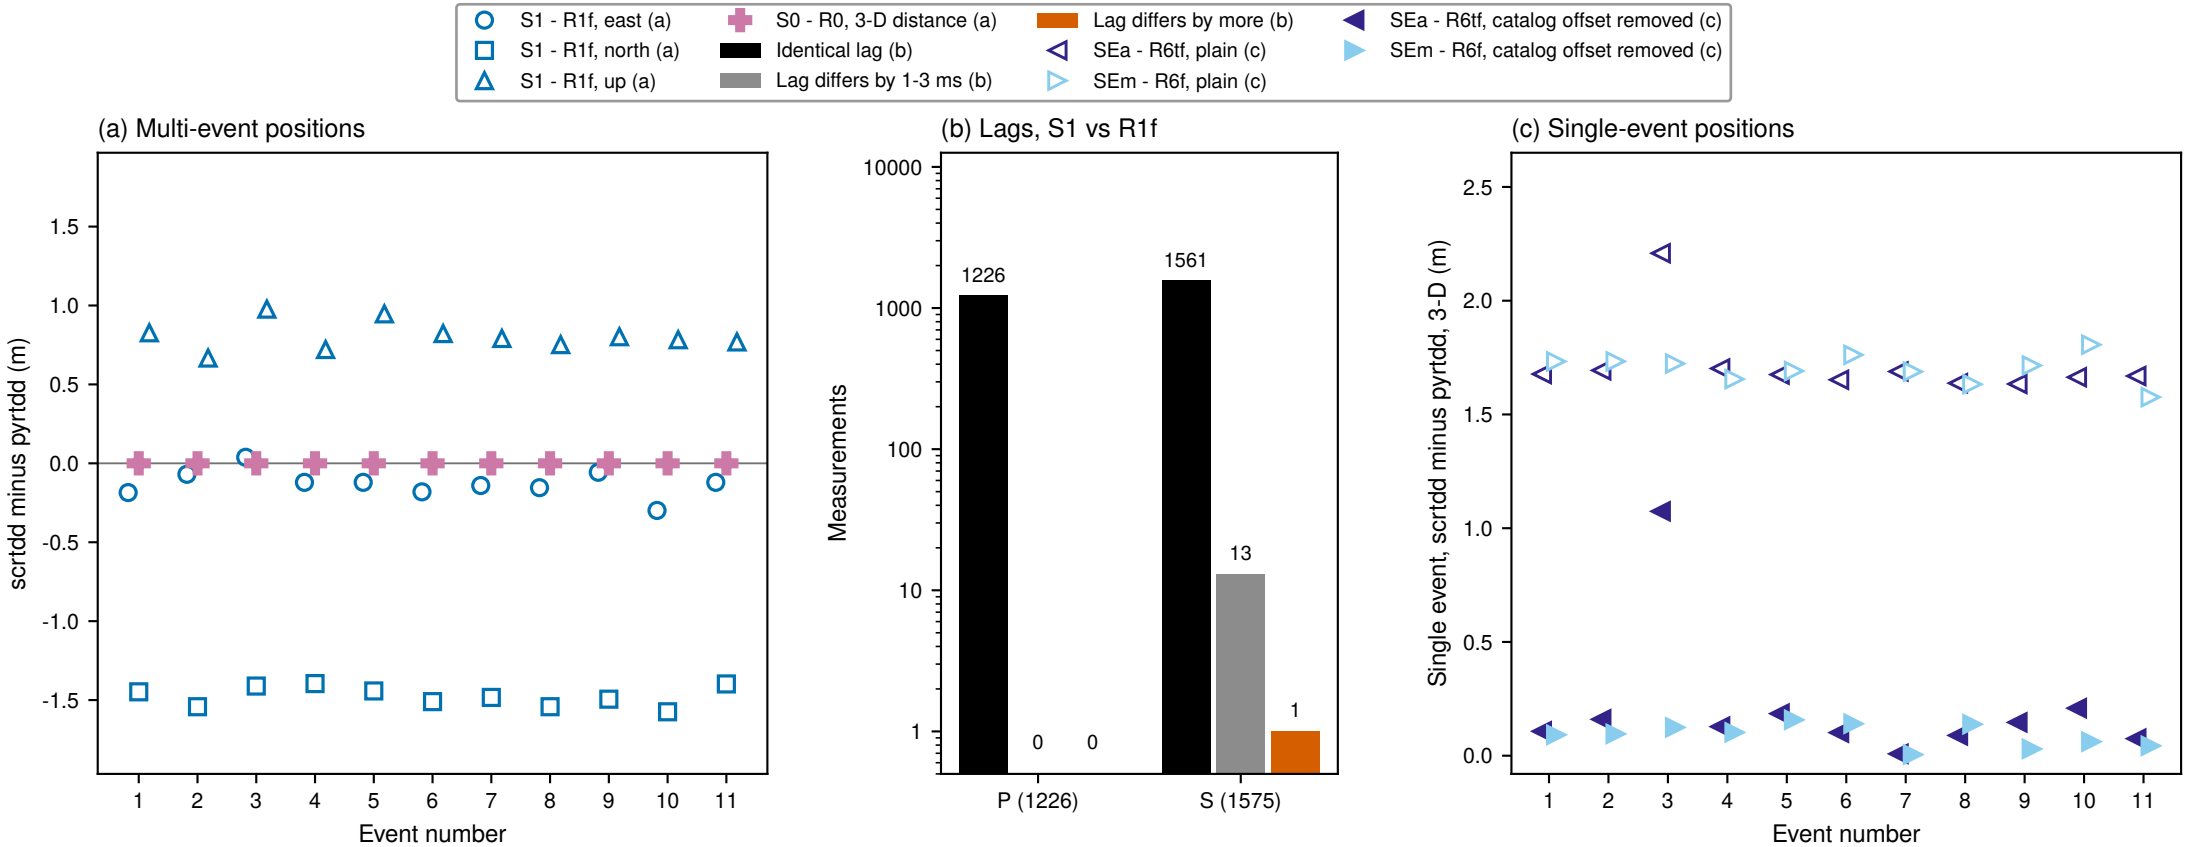
pyrtdd = scrtdd: S0 = R0 to the last digit (largest difference 0 m); S1 - R1f at most 1.8 m, 2787 of 2801 lags identical; single-event runs agree to 0.13 / 0.10 m (median) once the catalog offset is removed



(a) S1 - R1f is mostly a common shift (mean east / north / up -0.13 / -1.48 / +0.81 m); the relative geometry differs by at most 0.25 m. Largest CC difference S1 - R1f 0.0019. (c) Largest after removing the offset: SEa - R6tf 1.07 m (event 3), SEm - R6f 0.16 m. pyrtdd's single-event runs use the padded batch loading (note 07, section 1b).
