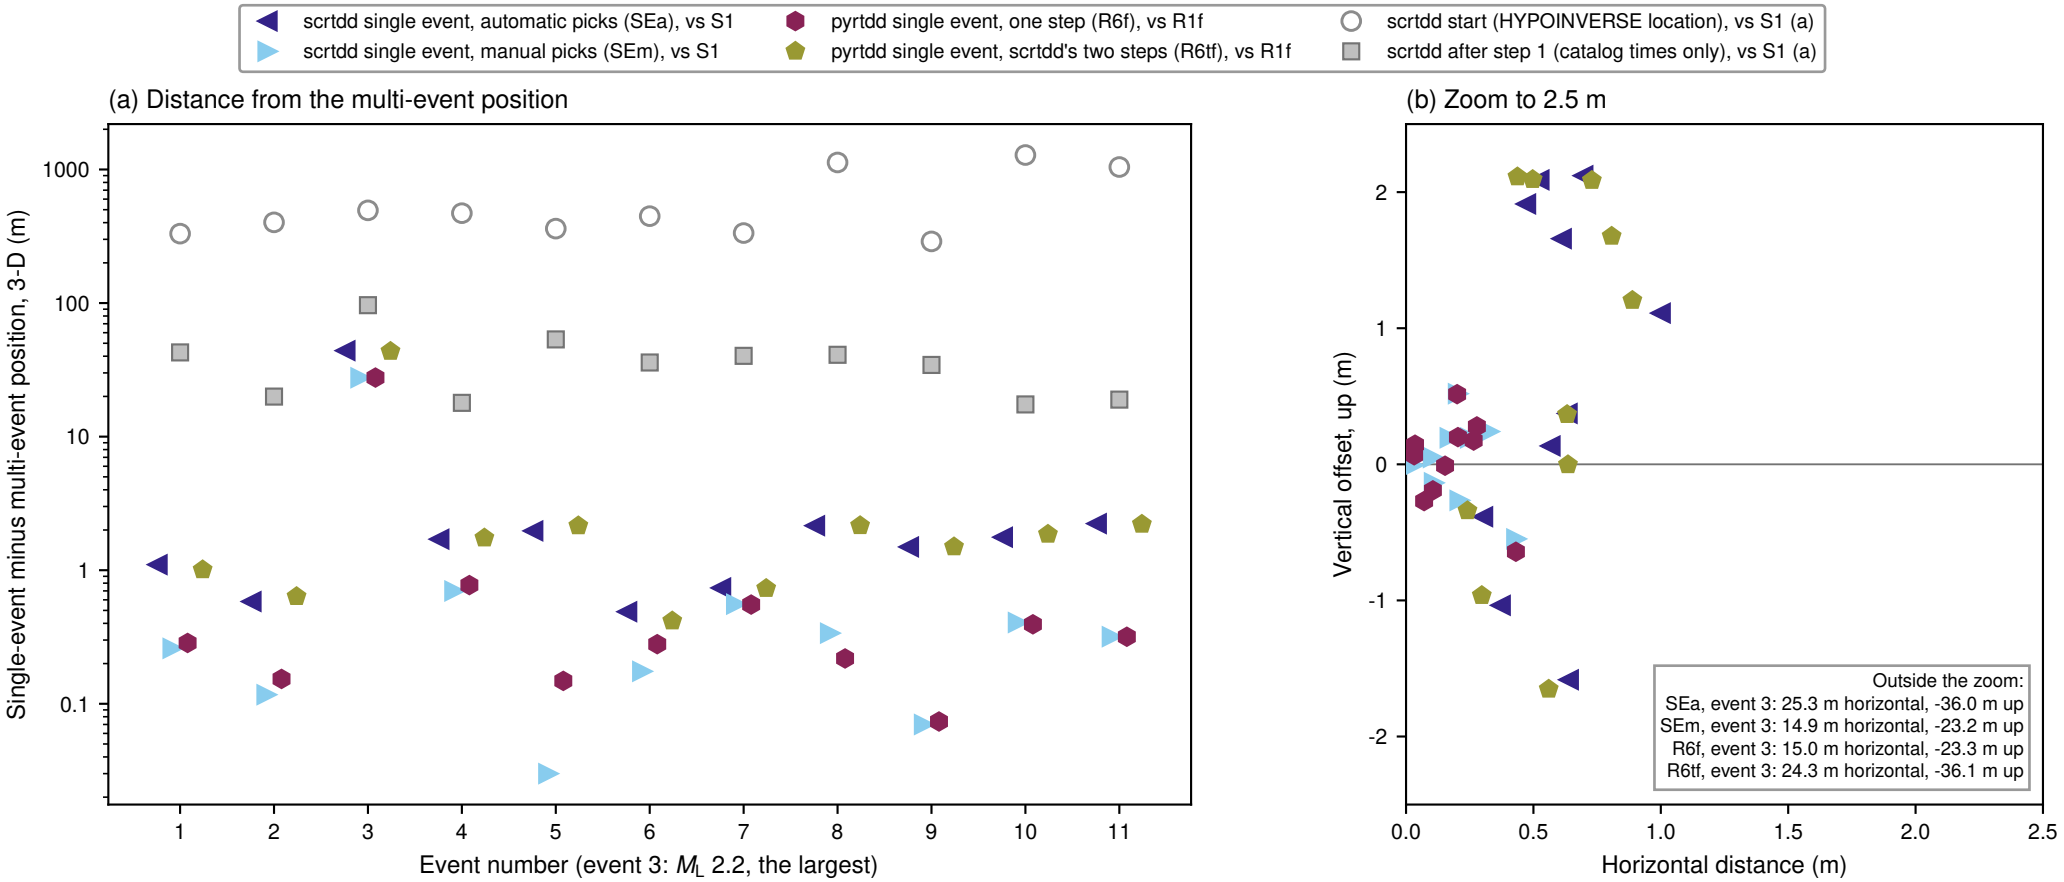
Single-event relocation lands within 0.3-1.7 m (median) of the multi-event position, starting 447 m away; event 3 is the exception (28-44 m)



Largest distance without event 3: SEa 2.2 m, SEm 0.7 m, R6f 0.8 m, R6tf 2.2 m. Event 3 also has the widest HypoDD bootstrap box and was cross-correlated with a special window in the reference. SEa and R6tf treat the picks as automatic (longer real-time window), SEm and R6f as manual.
