pyrtdd and scrtdd give the same catalog: median distance 0.25 m (S0 vs P0) and 1.1 m (S1 vs P1), 97.9% of the lags identical; one event with 9 picks ends 6.3 km apart over a single S lag

(c) The only lag of 72544210 that differs by more than 1 ms is its S at NC.CBR with event 72540100: +28 ms in P1 (CC 0.738) against -79 ms in S1 (CC 0.737): two almost equally high correlation peaks. Depth 9.9 km in P1, 3.8 km in S1, 7.4 km in LDEO. (d) 62 measurements lie on opposite sides of |CC| = 0.7 (P 14, S 48); the largest CC difference is a sign flip (P at BK.BDM: -0.801 in P1, +0.800 in S1). Differences below 0.0001 m are drawn at the left edge (a) or bottom (b).
